1. Introduction. Polymer composites are of scientific and industrial interest because of their enhanced properties arising from the reinforcement of nanofillers , , , , , . A variety of carbon nanomaterials such as carbon nanotubes , , , and graphite nanoplatelets , , have been used for preparing polymer composites.

SAM is an interdisciplinary peer-reviewed journal consolidating research activities in all experimental and theoretical aspects of advanced materials in the fields of science, engineering and medicine including synthesis, fabrication, processing, spectroscopic characterization, physical properties, and applications of all kinds of inorganic and organic materials, metals, semiconductors ...

### **Science of Advanced Materials â€“ SAM**

1. Introduction. Graphite-like nanoplatelets have recently attracted attention as a viable and inexpensive filler in composite materials , , that can be used in many engineering applications, given the excellent in-plane mechanical, structural, thermal, and electrical properties of graphite . These excellent properties may be relevant at the nanoscale if graphite can be exfoliated into thin nanoplatelets, and even down to the single graphene sheet level . Graphite nanoplatelets have often ...

1. Introduction. Composite materials derived from epoxy resin and carbon fibers are being extensively employed in aircraft industries because of their strength, high modulus and light weight 1-4.
