Characterization of Plastics in Failure Analysis Jeffrey A. Jansen, Stork Technimet, Inc. THE ULTIMATE OBJECTIVE of a failure analysis is to ascertain the mode and the cause

Characterization of Plastics in Failure Analysis

Lucideon is an independent materials testing & analysis laboratory, working across a range of materials, including ceramics, metals & polymers, offering standard & bespoke testing

Materials Testing, Analysis & Characterization Laboratory

EPA has developed this web site to summarize information about selected full-, field- and pilot scale applications of nanotechnology. Nanotechnology is an emerging technology that is generally defined as the ability to create and use materials, devices and systems with unique properties with a size of approximately 1 to 100 nanometers (nm).

1. Introduction. Eighty percent of plastics in the world are thermoplastics. The most commonly used ones in food packaging industry are usually polystyrene, polyethylene, polyvinyl chloride, etc. (Reyne, 1991).

Characterization of plastic packaging additives: Food contact

Liquid metal consists of alloys with very low melting points which form a eutectic that is liquid at room temperature. The standard metal used to be mercury, but gallium-based alloys, which are lower both in their vapor pressure at room temperature and toxicity, are being used as a replacement in various applications.

Liquid metal - Wikipedia

The Minerals, Metals & Materials Society (TMS) is a professional association that connects minerals, metals, and materials scientists and engineers who work in industry, academia, and government positions around the world.

Technological Innovations in Metals Engineering (TIME 2018)

Powder diffraction is a scientific technique using X-ray, neutron, or electron diffraction on powder or microcrystalline samples for structural characterization of materials. An instrument dedicated to performing such powder measurements is called a powder diffractometer.

Powder diffraction - Wikipedia

JOM explores the full range of minerals, metals, and materials science and engineering to represent all interests of the TMS membership, including extraction, characterization, processing and fabrication, design, applications, industrial and manufacturing developments, resource and supply chain issues, and life-cycle and sustainability practices.
