### **chemical shifts and coupling pdf**

In nuclear magnetic resonance (NMR) spectroscopy, the chemical shift is the resonant frequency of a nucleus relative to a standard in a magnetic field.

Trainable software for fast and accurate prediction of NMR spectra, chemical shifts, and coupling constants. The accuracy of prediction can be further improved through system training with your own data. An internal database calculates accurate NMR spectra under any basic frequency. Explains the predicted shift. Allows you to increase its accuracy of prediction using a Self Training System. Takes into account second order interactions (strong coupling effects) and long-range coupling constants.
