The art of building small. The research program of the Feringa group is focussed on synthetic and physical organic chemistry. Inspired by Nature's principles of molecular assembly, recognition, transport, motion and catalysis, the goal is to exploit the full potential of synthetic chemistry to create new structures and functions.

Humans have 60–70 O₂-dependent oxygenases, of which some are important therapeutic targets. A priority in the development of oxygenase inhibitors is to identify scaffolds selective for a particular enzyme, made challenging by the highly conserved oxygenase active sites.
