Classical Algebraic Geometry: a modern view IGOR V. DOLGACHEV. Preface The main purpose of the present treatise is to give an account of some of the topics in algebraic geometry which while having occupied the minds of many mathematicians in previous generations have fallen out of fashion in modern times. Often in the history of mathematics new ideas and techniques make the work of previous generations of researchers obsolete, especially this applies to the foundations of the subject and the ...

"Ribenoim's *Classical Theory of Algebraic Numbers* is an introduction to algebraic number theory on an elementary level. Ribenoim's book is a well written introduction to classical algebraic number theory and the perfect textbook for students who need lots of examples." (Franz Lemmermeyer, Zentralblatt MATH, Vol. 1082, 2006)

Classical algebra. François Viète's work at the close of the 16th century, described in the section Viète and the formal equation, marks the start of the classical discipline of algebra.
