In software development, distributed version control (also known as distributed revision control) is a form of version control where the complete codebase - including its full history - is mirrored on every developer's computer. This allows branching and merging to be managed automatically, increases speeds of most operations (except for pushing and pulling), improves the ability to work offline, and does not rely on a single location for backups.

1. Why study management control systems as a package? The idea of management control systems (MCS) operating as a package 1 has existed for over 30 years (Otley, 1980) and there have been regular calls to study the phenomenon (Chenhall, 2003, Dent, 1990, Fisher, 1998, Flamholtz et al., 1985, Otley, 1980).
